

Original Plan (MVP Document)

- **Interface:** Streamlit web app for file uploads
- **Workflow:** Users manually upload audio files → Whisper transcription on uploaded files
- **Knowledge Base:** Basic RAG with manual document management
- **Storage:** SQLite + in-memory vectors
- **Limitations:** No real-time meeting integration, file upload only

Updated Implementation

- **Control Layer:** MCP server enabling AI-native control via Claude
- **Meeting Integration:** Universal meeting bot automatically joins any platform (Teams, Zoom, Google Meet)
- **Transcription:** Real-time during live meetings
- **Knowledge Base:** Auto-learning RAG fed directly from meeting transcripts
- **Proactive Features:** Calendar integration for pre-meeting briefings
- **Cost Model:** Zero-cost professional transcription service

Key Improvements

Real-time vs File Upload

- **Before:**

```
user.upload_audio_file() → transcribe() → store()
```

- **After:**

```
join_meeting(url) → real_time_transcription() → auto_store()
```

Interface Evolution

- **Before:** Traditional web UI with forms/buttons
- **After:** Natural language control through Claude MCP

Intelligence Upgrade

- **Before:** Manual document uploads to RAG
- **After:** Auto-ingestion from every meeting + calendar context

Platform Coverage

- **Before:** Audio file support only
- **After:** Teams, Zoom, Google Meet universal support

Business Impact

- Removed manual upload friction
 - Added proactive meeting preparation
 - Enabled fully AI-driven workflows
 - Maintained zero operational cost
-

Architecture Decision

Pivoted from a traditional SaaS model to an AI-native MCP integration after discovering existing universal meeting infrastructure with built-in transcription, allowing full focus on the intelligence layer.

Status

Enhanced system **fully operational** — significantly more capable than original MVP plan.
